Environment: A place to live, work and play	NI 9	Use of Public Libraries. The % of the adult population who say they have used a public library service at least once in the last 12 months.[DELETED FOR2010/11]	46.6%(2009) latest data	47.0%	-	-	-	-	-	-	GOOD TO BE HIGH: This is based on the Active People Survey. At a performance of 46.6 for 2009 we note a drop from 52.1% in 2008. There has been no further update since 2009. This indicator now has been deleted for 2010/11 and the question is no longer included in Active People survey. Please refer to proxy indicator L1 for current performance levels of physical visits to libraries.
	L1	Proxy Indicator for NI 9: Use of Public Libraries. The number of physical visits per 1000 population.	-	656000 visits	647,765 visits	642,687 visits	647,567 visits	-	RED	-	GOOD TO BE HIGH: Status: Red: Performance of 642,639 visits to January 2011 (rolling year) against a target of 656,000 visits shows we are below target and represents a decrease from the previous month of 647,567 visits. This is partly attributable to Peoples Network(PN) being unavailable for a week in January. Wi-fi which attracts a fair number of visitors was also unavailable for at least three weeks. In addition Langley's visitors were slightly reduced compared to January last year, most likely due to problems with PN, but there was still an increase from December last year. However we note that Cippenham and Britwell library visits were both up compared to the previous month. It is important to note that the nature and number of virtual visits is increasing as users access the library facilities in ways that may be more convenient. Corrective Actions: -A new counter system has been installed which is having teething problems. This has been scheduled for repair and an accurate count will resume. In the event of the system not fulling picking up physical visits, benchmark from previous year will be b - Review of ICT delivery to take place - A programme of activities together with refurbishment of library - Implement system for monitoring virtual visits.

As at February 2011 performance is at 6.1% (20 clients out of 327) against an expected February target of 6.9% and an end of year target of 7.5% (which equates to approx 25 clients). We need to secure 5 more clients, however, since last year some clients have ceased employment or are no longer receiving employment support. It is therefore unlikely that when reviewing the remaining service users, 5 additional service users will be found who have gained paid employment since last year. End of year performance is projected to be just under target. Actions to improve performance: The schedule of reviews focusing on employment has been adjusted to improve performance. Review activity has been enhanced by allocating reviews to a newly appointed social worker.

Eng value is 10.9%.	GOOD TO BE LOW: Some placement change is inevitable, and beneficial, in meeting individual children's particular needs and best interests. However, we would begin to voice concerns if this figure were to exceed the target value. It is theoretically possible to exceed the target threshold yet still evidence best practice performance, since the individual needs of children and young people are what really matter here. Results remains in nationally recognised "best practice" zone (less than 16%).

Eng value is 13.4%.	GOOD TO BE LOW: In the 12 months to Dec 2010 there were 18 children who were made subject of a Child Protection Plan (CPP) for a second a subsequent time. This represents a percentage of 16.1% of all children who were made subject of a CPP in the 12 months to Dec 10. The DCSF banding advocates that anything below 15% is good performance – our performance shows that our Child Protection Plans lead to lasting improvements in child safety and overall well-being leading to the vast majority of children not requiring another CPP. We will be working more closely with community early intervention agencies and partner organisations to develop a 'step down' procedure that will ensure that CYP have a comprehensive support plan in place to provide the assistance they need when they are discharged from a formal CPP. This should result in fewer numbers of children being subject to a CPP for a second or subsequent time. This indicator takes no account of time between CP Plans, nor of the reasons for the child becoming subject to a CPP. So, in theory a child may have a CPP briefly at birth, then again aged 1

The comparator data is not yet released however it's well below the 2009/10 England average of 6.4% and the second lowest rate within Berkshire. Performance is 0.6% above our current ambitious target of 4.3%. Due to the recession it has been a challenge to maintain a low rate however this is been achieved through the support programmes that we have embedded. Slough's NEET rate will be compared against our comparators once the published information is released.
