^a All diabetes includes maturity onset diabetes of the young (MODY), other specified diabetes and not specified diabetes.

^b For patients under 12 years of age, 'all treatment targets' is defined as HbA1c only as other treatment targets are not recommended in the NICE guidelines for this age group.

^c BP ≤140/80 does not take into account whether or not patients have eye, kidney or vascular disease.

^d Where patients have achieved HbA1c ≤58mmol/mol, cholesterol <5mmol/L and the blood pressure target.
