Precis	Please find below my comments regarding the recent planning application to demolish existing buildings and a data centre on the Poyle road Colnbrook.				

The reference number for this case is - P/10076/013

Objection

Access- Upon viewing the plans it is not clear that the access road to our farmland (please see attached photograph) will be kept clear . Continual access is required at all times to the farmland at the rear of our property and it does not look like this has been taken into consideration. The access road (our right of way) and all gates leading into the farmland must also be kept clear . Access is required around the clock for agricultural machinery, key to servicing the field due to the nature of our business. Currently we have security measures in place to deter illegal habitation of our land which is a constant problem in rural communities, we are concerned this will also become compromised.

Fire risk - Fire access is essential especially when the weather conditions change having less precipitation in the summer months preharvest and the land is arid. Dry grasses are extremely flammable and the dry seasons create a higher risk of fire .

Kind regards
